SUMMARY

Computer Science Engineering graduate with hands-on experience in Python, Machine Learning, SQL, Pandas, NumPy, and Flask. Currently working as a Machine Learning Intern at Valentius Kryptix, gaining practical experience in ML model development and data analysis. Developed projects including House Price Prediction, Crop Prediction, and AI Personal Expense Advisor. Strong problem-solving skills with a keen interest in Data Science and Machine Learning.

EXPERIENCE

Machine Learning Intern at Valentius Kryptix | Aug 2026 – Present

Developed and evaluated machine learning models using Python and Scikit-learn on real-world datasets. Built and compared supervised and unsupervised models, including Decision Tree, Random Forest, and KMeans Clustering. Performed data preprocessing, feature selection, model training, and evaluation using Accuracy, Precision, Recall, F1-score, and Confusion Matrix. Worked on ML model benchmarking and comparison to identify suitable algorithms based on performance.

Performed data cleaning, preprocessing, exploratory data analysis, feature selection, and feature engineering.

Trained models using appropriate training and testing datasets and analyzed their performance.

Evaluated models using Accuracy, Precision, Recall, F1-score, Confusion Matrix, and other performance metrics.

Performed hyperparameter tuning to improve model performance and reliability.

Compared multiple algorithms based on accuracy, performance, and suitability for the given dataset.

Worked on ensemble learning and model benchmarking to understand the strengths and limitations of different algorithms.

PROJECTS

Gen AI Personal Expense Advisor

Git: https://github.com/Spratik2025/AI_Personal_Expense_Advisor

Live Demo: <http://Pratiksutar2002.pythonanywhere.com>

- Technologies: Python, Flask, Google Gemini API, HTML, CSS
- Developed a Generative AI-powered personal finance advisor that analyzes users' income, expenses, savings, dependents, and financial goals to provide personalized financial guidance.
- Integrated the Google Gemini API to generate context-based financial insights, budgeting suggestions, expense management strategies, and saving recommendations.
- Designed a Flask-based web application with structured user input and dynamic result pages for an interactive user experience.
- Implemented backend processing to collect and pass user financial information to the Gemini API and display the generated recommendations.
- Developed a prompt-based GenAI workflow to provide relevant responses according to the user's financial situation and goals.
- Deployed the application on PythonAnywhere and configured the web application for online access.

Crop Recommendation System

Git: https://github.com/Spratik2025/Crop_Prediction

Live Demo: <https://pratiksutar2003.pythonanywhere.com/>

- Technologies: Python, Pandas, NumPy, Scikit-learn, Flask, HTML, CSS
- Developed a Machine Learning-based Crop Recommendation System to predict the most suitable crop based on soil and environmental conditions.
- Performed data preprocessing and used agricultural parameters including Nitrogen, Phosphorus, Potassium, Temperature, Humidity, pH, and Rainfall as input features.
- Implemented a Decision Tree Classifier for multi-class crop prediction and saved the trained model for application-level inference.
- Developed a Flask-based web application that accepts agricultural parameters from users and displays the predicted crop.
- Integrated the trained machine learning model with the Flask backend to provide real-time crop recommendations through a simple web interface.
- Used Pandas and NumPy for dataset handling and Scikit-learn for machine learning model development.

House Price Prediction

Git: https://github.com/Spratik2025/House_Price_Prediction

Live Demo: <https://pratiks.pythonanywhere.com/>

- Technologies: Python, Pandas, NumPy, Scikit-learn, Flask, HTML, CSS
- Developed a Machine Learning-based House Price Prediction web application to predict house prices based on property-related inputs.
- Performed data cleaning and preprocessing on the house price dataset to prepare it for model training.
- Built and trained a Machine Learning regression model and saved the trained model using Pickle for application-level prediction.
- Integrated the trained model with a Flask web application to accept user property details and generate predicted house prices.
- Designed user-facing HTML/CSS pages for entering property information and displaying prediction results.
- Used Pandas and NumPy for dataset handling and Scikit-learn for machine learning model development.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering Dr. Babasaheb Ambedkar Technological University (DBATU), Lonere, Raigad CGPA: 7.35/10	Aug 2022 – June2026
Higher Secondary Certificate (HSC) PVP College, Patoda Maharashtra State Board Percentage: 81.33%	June 2020 – March2022
Secondary School Certificate (SSC) BVP High School Maharashtra State Board Percentage: 83.00%	June 2019 – March 2020

TECHNICAL SKILLS

- Programming: Python, SQL
- Data Analysis: Pandas, NumPy, Matplotlib
- Machine Learning: Scikit-learn, Regression, Classification, Ensemble Learning, Model Evaluation
- Generative AI: Google Gemini API, Prompt Engineering, RAG Basics
- Web & Deployment: Flask, HTML, CSS, PythonAnywhere
- Database: MySQL
- Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook
- Core Concepts: Data Preprocessing, EDA, Feature Engineering, Model Training & Evaluation
